Table of Contents (continued)

Glass and Decals

Module 3A
Glass and Decals

This module identifies the name and part number prefix of each glass piece and decal used on each machine. The Overview section shows examples of a reel and a video machine with the glass pieces named and decal inserts labeled with the part number prefix and the decal series named. This section also includes the Glass and Decal Index Tables that list the part number prefixes for each machine model supported by Bally Gaming. The Decal Prefix Description table lists the decal prefix series and illustrates the series with an example part number and description. **Note: A "D" in the part number prefix indicates a decal, a "G" in the part number prefix indicates a glass piece.**

The Decal Example section shows scaled images of most available decals. Most decals are the same size and shape as the example decal, and have the dimensions shown in the Decal Sizes - Black and White Outline section, however, some decals may differ from the example decals shown in these sections. This depends on the decal series. The Decal Example and Decal Sizes sections have been included for reference in identifying replacement decals. Refer to the Machine Image section for model-specific decal locations. If there is a question about the use of a decal on a particular machine that is not evident in the Machine Image section, please refer to the Decal Index Tables in the Overview section.

The Machine Model Numbering Convention section has been included to help clarify model-specific glass and decal information listed in the tables and on the identification plate on the side of the machine. The Top Box section shows the available top boxes for Bally machines. NOTE: Top box height is "extended" 2.5-3.25 inches if the top box includes the Player Tracking panel (bracket, keypad, display, and cardreader). Measurements shown in the Top Box section are not exact but are intended to provide the necessary information to distinguish between models.

The reel glass examples are included to show the relative differences in length and decal configuration of common reel glass that may not be evident in the Machine Image section. A standard top box/feature glass, and a top box/feature glass and a belly glass with decals configured for a package game, have been included to show different decal options.

The Machine Images section shows the most common decal configuration for each model, and shows alternate configurations as a pull-out image where applicable. The pointer labels include the part number prefix for the glass or decal, as well as the part description.

The Express Model Theme and Art Table are included to facilitate replacement part ordering.

If you have questions about a decal, piece of glass, or its part number, please contact your Bally Customer Service representative (contact information listed in the inside front cover and last page of this document.)

Decal Sizes - Black and White Outlines - Actual Size

This section shows an outline from each series of decals. The exact size is shown so that when selecting a replacement, the size can be measured against these outlines to ensure that the correct decal is being requested. Refer to the Machine Image section for exact decal placement on the machine, or the Decal Prefix Index table at the front of this module for model-specific decal information. The decal outlines shown here do not include the stroke (small extension beyond the decal size which is covered by the window opening outline) in the dimensions.

Machine Model Numbering Convention

This section shows the breakdown of Machine Model Numbers. The Machine Model Number, the serial number and the manufacturing date, are located on the Bally Gaming identification plate on the lower right side of the cabinet. Use the following tables to identify the machine model for which you are ordering parts. Please refer to the machine model number, in addition to the glass and decal prefixes listed, when ordering parts.

Reel Model Numbers

Refers to Laminate Finish, see Laminate Color list

The slant machine Feature Top Box Model Number convention refers to the specialty machines produced by Bally Gaming that use a slant reel machine as a platform, and have a "feature" top box. This numbering convention refers only to the top box, however. These specialty machines are sold as a unit. The top box is not available separately.

Top Boxes

This section shows the available top boxes for Bally machines. This section was included because it is not possible to show every configuration for each machine model. The top boxes and decal configurations shown in the Machine Image section are general representations but may be assembled differently due to top box selection, or a decal variation. The configurations shown in the Video and Slot Machine sections should not be considered as the only option. "Extended Top Box" refers to top boxes configured with the Player Tracking system. This system usually includes a bracket, keypad, cardreader, and display, as shown here, with a decal overlay for the bracket or faceplate.

Machine configuration variations are indicated in the Machine Model Number. Decal variations may be due to machine configuration variations, jurisdiction restrictions, or game-specific requirements. Refer to the tables in the front of this module for model-specific decal options. A Bally Gaming Customer Service Representative can assist with information not listed here (telephone, fax, and address information is located in the front inside and back cover of this module).

Top Boxes for Slant Machines

15"   18"
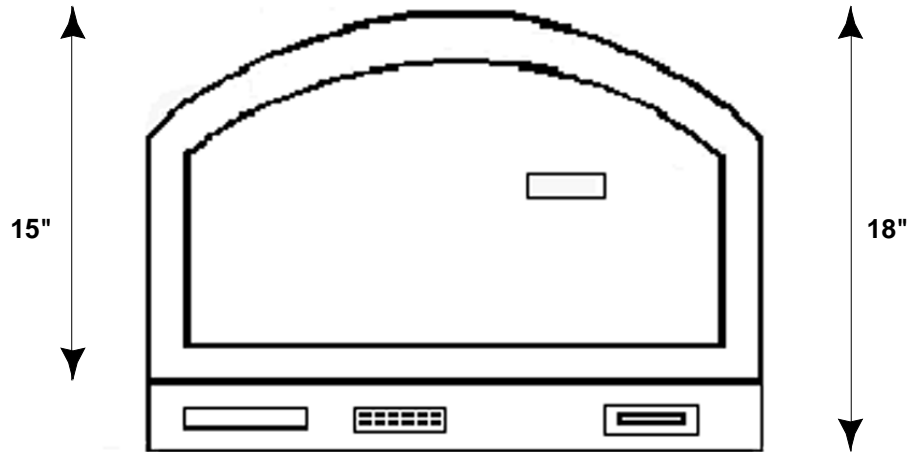

"Slant Round Top" or "Radius" Top Box

11"   14"
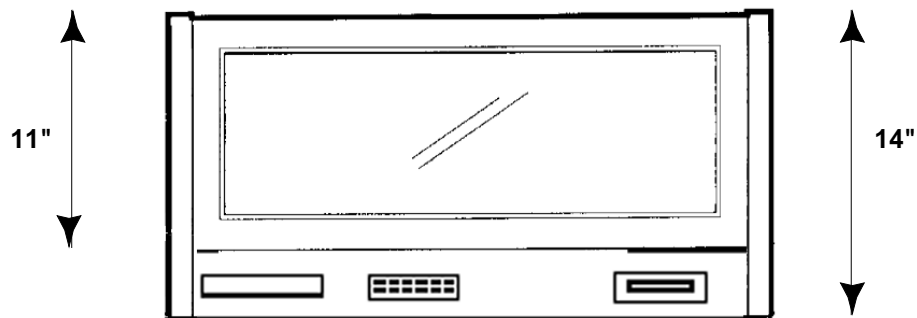

Standard Slant Top Box

NOTE: Measurements are not exact but are intended to provide a guide to differentiate between models. Machines with "extended" top boxes that are Player Tracking-ready will be 2.5" - 3.25" taller than top boxes without this feature.

Glass and Decals

(W6 style cabinet)**

NOTE: Measurements are not exact but are intended as a guide to differentiate between models. Machines with "extended" top boxes that are Player Tracking-ready will be 2.5" - 3.25" taller than top boxes without this feature.

Glass Examples

This section shows decal arrangements on common reel glass for machines with and without bill validators. (Note the difference in reel glass lengths due to bill validator configuration.) Also shown are Feature/Top Box glass and Display/Belly glass examples. It is not possible to show every glass configuration for each machine, although two configurations for the S6000 are shown in the Slot Machine Image section. The Feature/Top Box glass and Display/Belly glass have been included to show the decal arrangement for Package Games. **Note: A "D" in the part number prefix indicates a decal, a "G" in the part number prefix indicates a glass piece.**

G606 is the only reel glass for slant machines. Note: The D310 on G606 is not the same shape and size as the D310 on the G593. Some decal series have different sizes within the series; the most common examples are the D150 and the D310 series. Additionally, oddly sized and rare decals are listed in the D200 series. The D200 series is also the series name for the Player Tracking Overlay Decals. For assistance regarding the particular decal, please call your Bally Customer Service Representative. The address, fax and telephone information are listed within the front and back covers of this module.
