SAFETY PRECAUTIONS

CAUTION : No modifications of any circuits should be attempted. Service work should be performed only after you are thoroughly familiar with all of the following safety checks and servicing guidelines.

SAFETY CHECK

Care should be taken while servicing this analog color display because of the high voltages used in the deflection circuits. These voltages are exposed in such areas as the associated Fly-back transformer and yoke circuits.

FIRE & SHOCK HAZARD

- ✓ Insert an isolation transformer between the analog color display and AC power line before servicing the chassis.
- ✓ When servicing, pay close attention to the original lead dress especially in the high voltage circuit area; if a short circuit is found, replace all parts which have been overheated as a result of the short circuit.
- ✓ All the protective devices must be reinstalled per original design.
- ✓ Soldering must be inspected for possible cold solder points, frayed leads, damaged insulation, solder splashes or sharp solder points. Be certain to remove all foreign materials.

IMPLOSION PROTECTION

Picture tube in this monitor employs integral implosion protection system, but care should be taken to avoid damage and scratching during installation.

Only use same type replacement picture tubes.

IMPORTANT SAFETY NOTICE:

There are special components used in this analog color display, which are important for safety. These parts are marked on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent X-Ray, shock, fire or other hazards. Do not modify the original design without getting written permission from EFFINET SYSTEMS, Inc. or this will void the original parts and labor warranty.

SAFETY PRECAUTIONS

X-RAY

WARNING : The only potential source of X-Ray is the picture tube. However when the high voltage circuitry is operation properly, there is no possibility of an X-Ray problem. The basic precaution which must be exercised is to keep the high voltage at the following factory recommended level.

NOTE : It is important to use an accurate, periodically, calibrated high voltage meter.

- ✓ To measure the high voltage, use a high-impedance high-voltage meter. Connect(-) to chassis and (+) to the CRT anode button.
- ✓ Turn the Contrast & Brightness Control fully counterclockwise.
- ✓ Measure the high voltage. The high voltage meter should indicate the following factory recommended levels,
- ✓ If the upper meter indication exceeds the maximum level, immediate service is required to prevent the possibility of premature component failure.
- ✓ To prevent X-Ray possibility, it is essential to use the specified picture tube.
- ✓ The normal high voltage is 27KV or below and must not exceed 29KV at zero beam current at rated voltage.

GENERAL SAFETY INFORMATION

Terms in the manual

- CAUTION** Statements identify conditions or practices that could result in damage to the equipment or other property.
- WARNING** Statements identify conditions or practices that could result in personal injury or loss of life.

Terms as marked on equipment

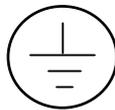

- CAUTION** Statements indicate a personal injury hazard not immediately accessible as one reads the marking or a hazard which properly included on the equipment itself.
- WARNING** Statements are clearly concerning indicated personal injury hazards.

Symbols in the manual

The symbols indicate where applicable cautionary or other information is to be found.

Symbols as marked on equipment

Protective GROUND terminal

High Voltage Warning & Critical Component Warning Label

The following warning label is on the CRT or metal case of the Monitor.

Warning: This product includes critical mechanical and electrical parts which are essential for x-ray protection. For continued safety, replace critical components that are indicated in the service manual with exact replacement parts given in the parts list. Operating high voltage with this product is 29KV at minimum brightness. Refer to service manual for measurement procedures and proper service adjustments.

SERVICING PRECAUTIONS

CAUTION : Before servicing instruments covered by this service manual, its supplements, and addendum, please read and follow the SAFETY PRECAUTIONS of this manual.

NOTE : If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this manual, always follow the safety precautions.

General Servicing Precautions

1. Always unplug the AC power cord from source before:
 - ✓ Removing or reinstalling any component, circuit board, module, or any other instrument assembly.
 - ✓ Disconnecting or reconnecting any electrical plug or other electrical connection
 - ✓ Connecting a test substitute in parallel with an electrolytic capacitor in the instrument.
2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM. Etc.) equipped with a suitable high voltage probe. Do not test high voltage by “drawing an arc”.
3. Discharge the picture tube anode only by (a)first connecting one end of an insulated clip lead to the degaussing or line grounding system shield at the point where the picture tube socket ground lead is connected, and then (b) touching the other end of the insulated clip lead to the picture tube anode button, using an insulating handle to avoid personal contact with high voltage.
4. Do not any spray chemicals on or near this instrument, or any of its assemblies.
5. Unless otherwise specified in this service manual, only clean electrical contacts by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick, or comparable nonabrasive applicator: 10%(by volume) Aceton and 90%(by volume) isopropyl alcohol(90%-99% strength).

CAUTION : A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in a explosion.

- ✓ Discharging the picture tube anode.

CAUTION : This is a flammable mixture. Unless specified in this service manual, lubrication of contacts is not required.

SERVICING PRECAUTIONS

6. Do not damage any plug/socket B+ voltage interlocks with which instruments covered by this service manual might be equipped.
7. Do not apply AC power to this instrument and/or any other of its electrical assemblies unless all the solid-state device heat sinks are correctly installed.
8. Always connect the test instrument ground lead to the appropriate instrument chassis ground before connecting the test instrument positive lead. Always remove the test instrument ground lead last.
9. Only use the test fixtures specified in this service manual with this instrument.

CAUTION : Do not connect the test fixture ground strap to any heat-sink in this instrument.

Electro-statically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity.

Such components are commonly called Electro-statically Sensitive (ES) Devices.

The typical examples of ES devices are integrated circuits, some field-effect transistors, and semiconductor “chip” components. The following techniques should be used to help reduce the incidence of component damage by static electricity.

1. Immediately before handling any semiconductor or semiconductor-equipped assembly, wipe off any electrostatic charge on your body by touching any known earth ground. Alternatively, obtain any commercially available discharging wrist strap device which should be removed for potential shock reasons point to applying power to the unit under testing conditions.
2. After removing the electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil to prevent electrostatic charge buildup or exposure to the assembly.
3. Only use a grounded-tip soldering iron to solder it unsolder ES device.
4. Only use an anti-static type solder removal device. Some solder removal devices not classified as “anti-static” can generate enough electrical charges to damage ES devices.
5. Do not use Freon-propelled chemicals. These can generate enough electrical charges to damage ES devices.

SERVICING PRECAUTIONS

6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil, or comparable conductive material).
7. Immediately before removing the protective material from the leads of replacement ES devices, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION : Be sure that no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily movements when handling unpackaged replacement Es devices. (Otherwise harmful motion such as the brushing together clothes fabric or the lifting your foot from a carpeted floor can generate enough static electricity to damage ES devices).

General soldering Guidelines

1. Use a grounded-tip, low-wattage soldering iron with appropriate tip size and shape that will maintain tip temperature between a 550°F-660°F(288°C-316°C)range.
2. Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron clean.
4. Clean the surface to be soldered. Use a small wire-bristle(0.5 inch or 1.25cm) brush with a metal handle. Do not use Freon-propelled spray-on cleaners.
5. Use the following soldering technique:
 - ✓ Allow the soldering iron tip to reach normal temperature (550°F to 660°F or 288° C to 316°C)
 - ✓ Hold the soldering iron tip and solder strand against the component lead the solder melts.
 - ✓ Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there until the solder flows onto and around both the component lead and foil.
 - ✓ Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

SERVICING PRECAUTIONS

IC Removal/Replacement

Some utilized chassis circuit boards have slotted (oblong) holes through which the IC leads are inserted and bent flat against the circuit foil. When holes are slotted, the following technique should be used to remove and replace the IC.

Removal

1. De-solder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with de-soldering braid before removing the IC).

Replacement

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the area)

“Small-signal” Discrete Transistor Removal / Replacement

1. Remove the defective transistor by clipping its leads as close as possible to component body.
2. Bend the ends of each of three leads remaining on the circuit board into a “U” shape.
3. Bend the replacement transistor leads into a “U” shape.
4. Bend the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the “U” with long nose pliers to ensure metal-to-metal contact, then solder each connection.

Power IC, Transistor or Devices Removal/Replacement

1. Heat and remove all solders from the device leads.
2. Remove the heat-sink mounting screw (if applicable).
3. Carefully remove the device from the circuit board and
4. Insert new device in circuit board.
5. Solder each device lead and then clip off excess lead.
6. Replace heat-sink.

BRIEF SPECIFICATION

This color monitor automatically scans all horizontal frequencies from 30KHz to 50KHz, and all vertical frequencies from 50Hz to 80Hz. Since This color monitor adopted the OSD (On Screen Display), it shows the sync polarity and frequency and it provides that easily adjust control. And also this color monitor has a maximum horizontal resolution of 1024 dots and a maximum vertical resolution of 768 lines for superior clarity of display.

Scanning Frequency	Horizontal	30 ~ 50KHz
	Vertical	50 ~ 80Hz
Video Bandwidth(Pixel Clock)		65MHz
Standard Timing		720x400 @70Hz, 640x480 @60/75/85Hz 800x600 @56/60/72/75Hz 1024x768 @60Hz
Display Area	Normal	535 mm (H) x 400 mm(V)
	Maximum	540.8 mm(H) x 405.6mm (V)
Input Signal	Video	RGB Analog (0.7V, 75ohms)
	Sync	H/V Separate(TTL)
Input Signal Connector		15pin D-Sub / AMP Connector
Power	AC Input	AC 90 ~ 265V @60/50Hz, Universal Power
Control Button		Power, Up, Down, Menu, Right, Left
Control	Screen	Brightness, Contrast
	Size	H-Size, V-Size
	Center	H-Position, V-Position
	Geometry	Pincushion, Trapezoid, Pin-Balance, Parallelogram, Rotation
	Color	Color Temperature (9300°K/6550°K/User), R-Gain, G-Gain, B-Gain
	Utility	Degauss, Recall, CLTC(CRT Life Time Counter), Self Diagnosis 5 Languages(Eng / Deu. /Esp. /Fra. /Ita.)
Environmental Conditions	Operating	Temperature : 5 to 60°C / Humidity : 8 to 90%
	Storage	Temperature : -20 to 70°C / Humidity : 5 to 90%

GENERAL INFORMATION

Abbreviations

ADJ	Adjustment
AFC	Automatic Frequency Control
CRT	Cathode Ray Tube
Def	Deflection
D.Y	Deflection Yoke
FBT	Fly-back Transformer
HVG	High Voltage Generator
H. SYNC	Horizontal Synchronization
OSC	Oscillator
P. S. U	Power Supply Unit
PWA	Printed Circuit Board Wiring Assembly
R. G. B	Red, Green, Blue
V. SYNC	Vertical Synchronization

Cautions for Adjustment and Repair

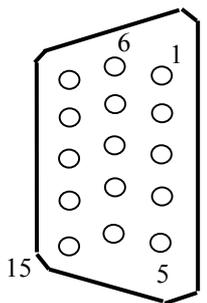

- ✓ Degaussing is always required when adjusting purity or convergence.
- ✓ The white balance adjustment has been done by a color analyzer in factory. The adjustment procedure, described in the service manual is made by a visual check.
- ✓ Allow 20 minutes warm-up time for the display before checking or adjusting only electrical specification or function.
- ✓ Reform the lead wire after any repair work.

Caution For Servicing

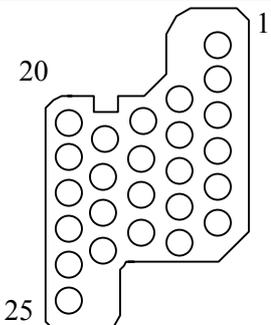

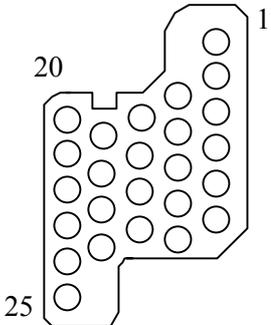

- ✓ In case of servicing or replacing CRT, high voltage sometimes remains in the anode of the CRT.
- ✓ Completely discharge high voltage before servicing or replacing CRT to prevent a shock to the serviceman.

PIN CONNECTION DIAGRAM

15pin D-sub Type

Connector Shape	Pin	Description	Pin	Description
	1	Red	9	No Connection
	2	Green	10	Ground - Sync

	8	Neutral		
	9	GND		
	10~25	No Connection		

INSTALLATION and ADJUSTMENT PROCEDURES

Adjustment Condition

- **AC Power Input** : AC 100V ~ 265V / 50~60Hz
 USA : 110V
 EUROPE : 230V
 AUSTRALIA : 240V
- **Aging Time**
 It should be turn on for minimum 30 minutes before adjustment.
 Especially for color temperature and white balance adjustment.
- **Input Signal Condition**
 Input Signal; Analog 0.7Vp-p, 75 Ohm Impedance
 Sync level ; TTL level(Negative, positive Sync.)
- **Input Signal Timing**
 If there's no special request, using the XGA(1024x768@60Hz) Timing

Voltage Adjustment

2-1. DC Voltage Adjustment

- 1) Turn on Monitor Power.
- 2) Connect positive(+) terminal of DVM on the 2nd Pin(lead of R622) of CN703
- 3) Check the measured voltage is within $6.3 \pm 0.05V$. If not, Adjust VR101.

2-2. High Voltage Adjustment

- 1) Turn off the Monitor and separate the Power cord or AMP Connector.
- 2) Connect the High Voltage Probe onto Anode Cap of CRT and Turn on the Monitor.
- 3) Check the measured High Voltage is within $27KV \pm 0.2KV$. if not, Adjust VR701.

Model Name	High Voltage Specification
EFG-2902F	$27KV \pm 0.2KV$

2-3. G2 Voltage Adjustment

- 1) Apply XGA(1024x768@60Hz) X-hatch Pattern to the Monitor.
- 2) Check measured G2 Voltage is within $500V \pm 10V$. if not, Adjust Screen VR of FBT.

2-4. Sub H-Size Adjustment

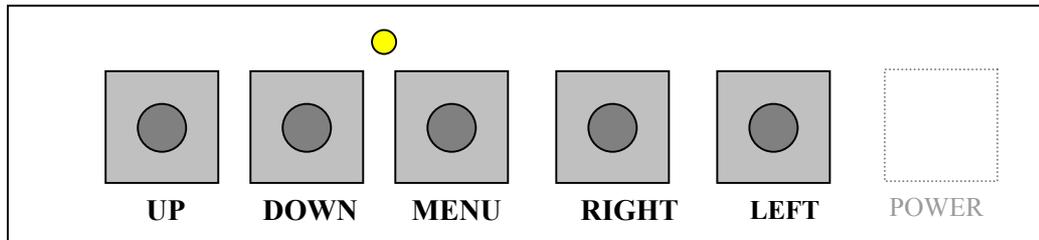

- 1) Apply XGA(1024x768@60Hz) X-hatch Pattern to the Monitor.
- 2) Set the H-Size control to Max. position with using OSD MENU.
- 3) Adjust VR501 so that H-Size can be slightly over-scanned.(About 10mm)

INSTALLATION and ADJUSTMENT PROCEDURES

Image Adjustment

3-1. Key Control & OSD

1) Key Control

- Right / Left : Move cursor to the right / left window on the OSD window.
- MENU : Launch OSD (On-Screen Display) MENU window.
- Up / Down : Increase / Decrease the value of selected Menu.

2) User and Factory Setting OSD Function

Icon	CONTROL	FUNCTION
	Contrast	Adjust the contrast level of the Display.
	Brightness	Adjust the brightness level of the Display.
	H. Size	Adjust the width (horizontal size) of the display.
	V. Size	Adjust the height (vertical size) of the display.
	H Position	Adjust the position of the display horizontally.
	V Position	Adjust the position of the display vertically.
	Pincushion	Adjust the left and right margins for more convex or more concave margins.
	Trapezoid	Adjust the trapezoid of the screen by moving the lines inward or outward.
	Parallelogram	Adjust the parallelogram when the screen is leaning left or right.
	Pin Balance	Adjust the side balance when the sides of the screen are bowed towards left or right.
	Rotation	Adjust the rotation when the screen is tilted left or right
	H-Linearity	Adjust the Horizontal line's gap (linearity)
	V-Linearity	Adjust the vertical line's gap (linearity) ; Factory setting Mode only
	Color Temp	Choose different preset color temperatures or set your own customized color parameters.
	Degauss (Right Key)	Degaussing keeps the monitor free from unwanted magnetism that can result in color impurity.
	Recall	Reset the screen to the factory Preset Display Settings
	CLTC	Display the Life Time of CDT
	Language	Select the OSD Language : 5 Language

INSTALLATION and ADJUSTMENT PROCEDURES

3-2. Factory Setting Mode

- 1) Factory Setting Mode : In case all the OSD adjustment is done in Factory Setting Mode, User can recall factory setting value anytime.
- 2) Press “MENU”, “UP” and “Right” Button 3 times simultaneously and see the OSD background color is changed to RED.
- 3) Perform the Image adjustment procedure.
- 4) Press “MENU” Button till OSD MENU screen is disappeared.
- 5) Press “MENU” button and Check whether OSD background color is blue.
- 6) Saved data will be restored only by AC power Off and On.

3-3. Image Adjustment

Effinet’s Monitor is designed with external computer controlled system.

During the factory production process, all the adjustment is done with Computer controlled Camera system.

No.	Adjustment Items	Specification	Reference	Remark
1)	H-Centering	$A-B \leq \pm 4\text{mm}$	Fig. 1	
2)	V-Centering	$C-D \leq \pm 4\text{mm}$	Fig. 1	
3)	H-Size (29 inch)	$H = 535 \pm 3\text{mm}$	Fig. 1	
4)	V-Size (29 inch)	$V = 395 \pm 3\text{mm}$	Fig. 1	
5)	Pincushion	$P \leq \pm 1\text{mm}$	Fig. 2	
6)	Trapezoidal	$HA-HB \leq \pm 2\text{mm}$	Fig. 3	
7)	Pin-Balance	$D1, D2 \leq \pm 2\text{mm}$	Fig. 4	
8)	Parallelogram	$P1 \leq 2\text{mm}$	Fig. 5	
9)	Tilt	$T1 \leq 2.5\text{mm}$	Fig. 6	
10)	H-Linearity	$A-B \leq \pm 3\text{mm}$	Fig. 7	
11)	V-Linearity	$C-D \leq \pm 3\text{mm}$	Fig. 7

INSTALLATION and ADJUSTMENT PROCEDURES

3-4. Brightness and Color Adjustment - 9300K

- 1) Select "9300K BIAS" ICON on OSD MENU
- 2) Apply Back Raster Pattern to the Monitor.
- 3) Set Contrast control to MAX. and Brightness control to level 16.
- 4) Change the factory mode to save.(press 3 times "Up" and "Right" button simultaneously at status of OSD menu)
- 5) Check the measured brightness of back raster is within Max. 0.5Ft-L. If not, Adjust "BR" by "Up" and "Down" button
- 6) Apply Small White pattern to the Monitor.
- 7) Check the measured brightness of small white is Min. 65Ft-L (Minolta color analyzer), If not, Adjust "CO"(brightness).
- 8) Apply Full White pattern to the Monitor.
- 9) Check the measured brightness of small white is Min. 32Ft-L, $x=0.281 \pm 0.015$, $y=0.311 \pm 0.015$ (Minolta color analyzer), If not, Adjust "ABL"(brightness), RG(x coordinate), BG(y coordinate).
- 10) If there's difficulty in adjustment, change the "GG" value and follow the procedure again.
- 11) To disappear OSD menu, Press the "Menu".

INSTALLATION and ADJUSTMENT PROCEDURES

3-4-1. Small White Brightness level Adjustment

- 1) Apply 1/8 full white pattern to the Monitor.
- 2) Select “CO” icon of “9300K Gain” OSD, and set brightness level to Min. 65Ft-L.

3-4-2. Full White Brightness level Adjustment

- 1) Apply Full White pattern to the Monitor.
- 2) Select “BL” icon of “9300K GAIN” OSD and set brightness level to Min. 32 Ft-L.

3-5. Brightness and Color Adjustment - 6550K

- 1) Select “6500K BIAS” icon on OSD MENU
- 2) Apply Back Raster Pattern to the Monitor.
- 3) Set Contrast control to MAX. and Brightness control to level 16.
- 4) Change the factory mode to save.(press 3 times “Up” and “Right” button simultaneously at status of OSD menu)
- 5) Check the measured brightness of back raster is within Max. 0.5Ft-L. If not, Adjust “BR” by “Up” and “Down” button.
- 6) Apply Small White pattern to the Monitor.
- 7) Check the measured brightness of small white is Min. 65Ft-L (Minolta color analyzer), If not, Adjust “CO”(brightness).
- 8) Apply Full White pattern to the Monitor.
- 9) Check the measured brightness of small white is Min. 32Ft-L, $x=0.313 \pm 0.015$, $y=0.329 \pm 0.015$ (Minolta color analyzer), If not, Adjust “ABL”(brightness), RG(x coordinate), BG(y coordinate).
- 10) If there’s difficulty in adjustment, change the “GG” value and follow the procedure again.
- 11) To disappear OSD menu, Press the “Menu”.

3-5-1. Small White Brightness level Adjustment

- 1) Apply 1/8 full white pattern to the Monitor.
- 2) Select “CO” icon of 6550K Gain OSD, and set brightness level to Min. 65Ft-L.

3-5-2. Full White Brightness level Adjustment

- 1) Apply Full White pattern to the Monitor.
- 2) Select “BL” icon of “6550K GAIN” OSD and set brightness level to Min. 32 Ft-L.

INSTALLATION and ADJUSTMENT PROCEDURES

3-6. Focus Adjustment

- 1) Apply X-Hatch pattern to the Monitor.
- 2) Adjust the upper volume of FBT so that horizontal line can be seen clearly.
- 3) Adjust the center volume of FBT so that vertical line can be seen clearly.
- 4) Apply “H” Character pattern and check focus status.

KEY COMPONENT SPECIFICATION

DEFLECTION PROCESSOR(S1D2511B01)

1) Block Diagram

2) Pin Assignments

Pin No.	Pin Name	Pin Function and Description
1	H/HVIN	TTL compatible horizontal sync input(Separate or composite)
2	VSYNCIN	TTL compatible vertical sync input (for separated H&V)
3	HLOCKOUT	First PLL lock/unlock output (0V unlocked - 5V locked)
4	PLL2C	Second PLL loop filter
5	CO	Horizontal oscillator capacitor
6	RO	Horizontal oscillator resistor
7	PLL1F	First PLL loop filter

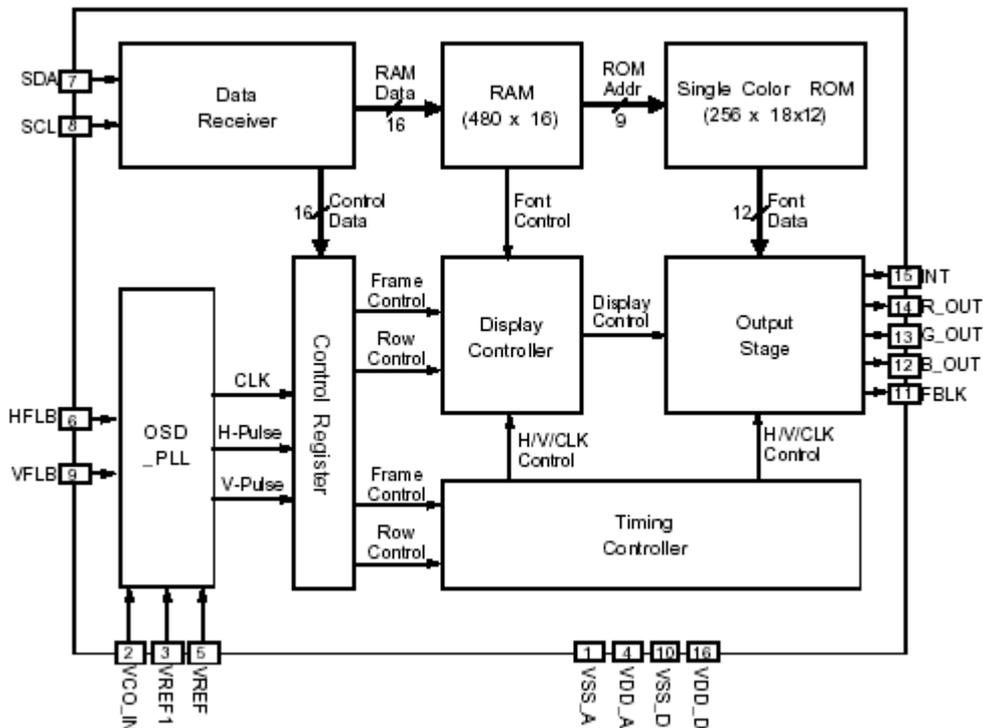

KEY COMPONENT SPECIFICATION

Pin No.	Pin Name	Pin Function and Description
8	HPOSITION	Horizontal position filter
9	HFOCUSCAP	Horizontal dynamic focus oscillator capacitor
10	FOCUSOUT	Mixed horizontal and vertical dynamic focus output
11	HGND	Horizontal Section Ground
12	HFLY	Horizontal Flyback Input (positive polarity)
13	HREF	Horizontal Section Reference Voltage (to be filtered)
14	COMP	B+ error amplifier output for frequency compensation and gain setting
15	REGIN	Regulation input of B+ control loop
16	ISENSE	Sensing of external B+ switching transistor current or switch for step-down converter
17	B+GND	Ground (related to B+ reference adjustment)
18	BREATH	DC breathing input control (Compensation of vertical amplitude against EHV variation)
19	VGND	Vertical section ground
20	VAGCCAP	Memory capacitor for automatic gain control loop in vertical ramp generator
21	VREF	Vertical section reference voltage (to be filtered)
22	VCAP	Vertical saw-tooth generator capacitor
23	VOUT	Vertical ramp output (with frequency independent amplitude and S or C corrections if any). It is mixed with vertical position voltage and vertical moiré.
24	EWOUT	Pincushion-East/West correction parabola output
25	XRAY	X-RAY protection input
26	HOUT	Horizontal drive output (internal transistor, open collector)
27	GND	General ground
28	BOUT	B+ PWM regulator output
29	Vcc	Supply voltage
30	SCL	I ² C clock input
31	SDA	I ² C data input
32	5V	Supply voltage

KEY COMPONENT SPECIFICATION

OSD Processor (S5D2508A)

1) Block Diagram

2) Pin Assignments

Pin no.	Pin Name	Active	I/O	Description
1	VSS_A	-	-	Ground (Analog Part)
2	VCO_IN	-	I	This voltage is generated at the external loop filter and goes into the input stage of the VCO.
3	VREF1	-	I	1.26 V DC Voltage from the Bandgap Reference. Connected to ground through a resistor to make internal reference current
4	VDD-A	-	-	+5 V Supply Voltage for Analog Part
5	VREF	-	I	Bandgap Reference Voltage (Typical 1.26 V)
6	HFLB	Low	I	Horizontal Fly-back Signal
7	SDA	-	I/O	Serial Date (I ² C)

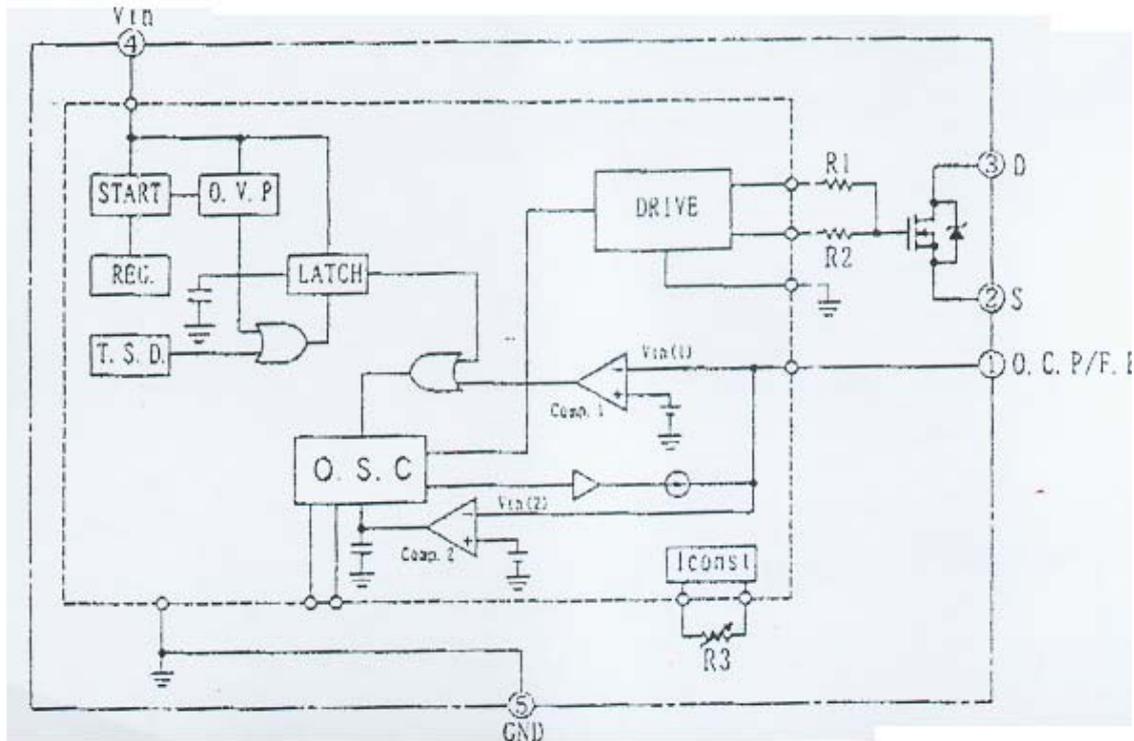

KEY COMPONENT SPECIFICATION

Pin no.	Pin Name	Active	I/O	Description
8	SCL	-	I/O	Serial Clock (I ² C)
9	VFLB	Low	I	Vertical Fly-back Signal
10	VSS_D	-	-	Ground for Digital Part
11	FBLK	-	O	Fast Blank Signal
12	B_OUT	-	O	Video Signal Output (B)
13	G_OUT	-	O	Video Signal Output (G)
14	R_OUT	-	O	Video Signal Output(R)
15	INT	-	O	Intensity Signal Output
16	VDD_D	-	-	+5 V Supply Voltage for Digital Part

KEY COMPONENT SPECIFICATION

Power Switch (STR-F6658B)

1) Block Diagram

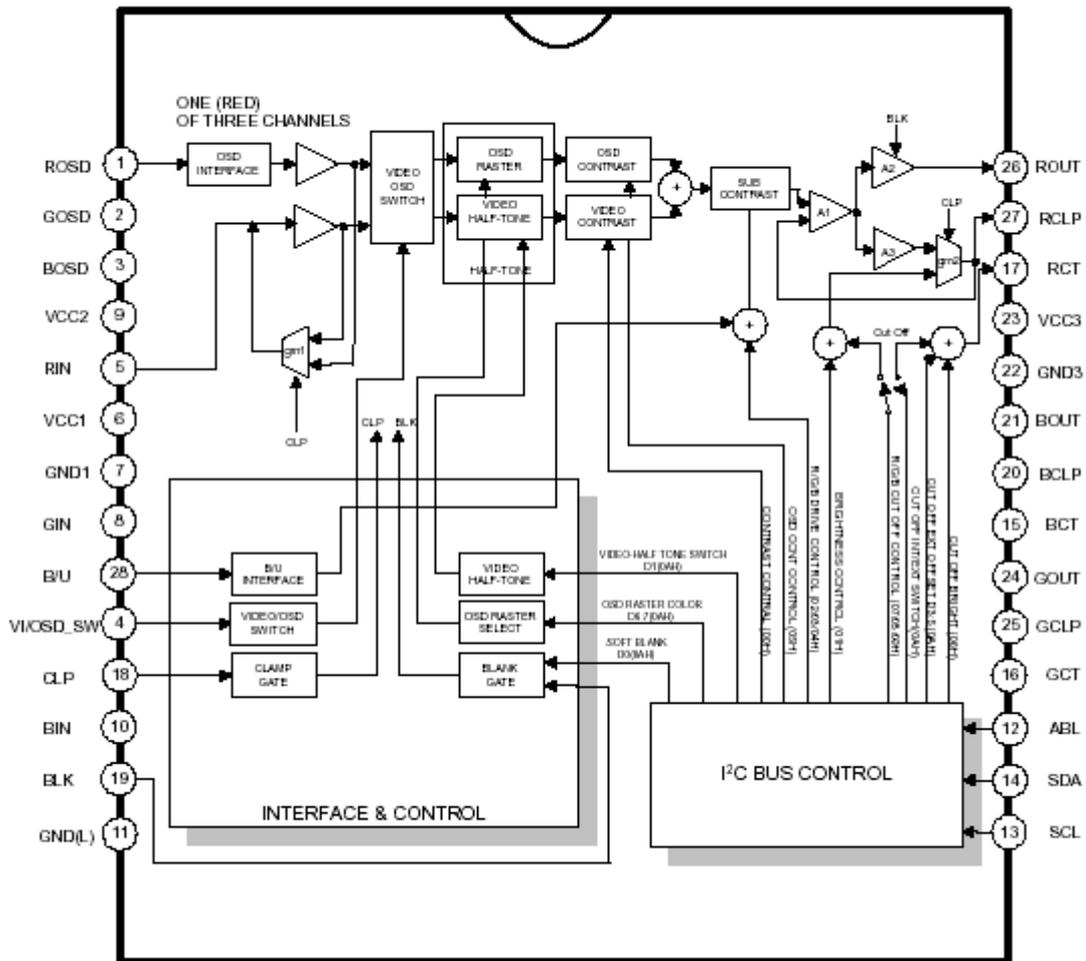

2) Pin Assignments

Pin no.	Pin Name	Description	Functions
1	O.C.P/F.B	- Over-current/Feedback terminal	Input of Over-current detection signal and constant voltage control signal
2	S	- Source Terminal	MOS FET source
3	D	- Drain Terminal	MOS FET Drain
4	VIN	- Power supply Terminal	Input of power supply for control circuit
5	GND	- GND terminal	Ground

KEY COMPONENT SPECIFICATION

Video Amplifier (S1D2500A01)

1) Block Diagram

2) Pin Assignments

Pin No	Symbol	I/O	Configuration
1	ROSD	I	Red OSD Input
2	GOSD	I	Green OSD Input
3	BOSD	I	Blue OSD Input
4	VI/OSD_SW	I	Video or OSD Switch

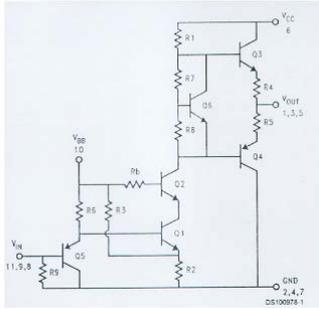

KEY COMPONENT SPECIFICATION

Pin No	Symbol	I/O	Configuration
5	RIN	I	Red Video Input
6	Vcc1	-	VCC (normal)
7	GND1	-	Ground1 (normal)
8	GIN	I	Green Video Input
9	Vcc2	-	VCC (normal)
10	BIN	I	Blue Video Input
11	GND (L)	-	Ground2 (logic)
12	ABL	-	Automatic Beam Limit
13	SCL	I/O	Serial Clock
14	SDA	I/O	Serial Data
15	BCT	I	Blue Cut Off Control
16	GCT	I	Green Cut Off Control
17	RCT	I	Red Cut Off Control
18	CLP	I	Clamp Gate Signal Input
19	BLK	I	Blank Gate Signal Input
20	BCLP	-	Blue Clamp Cap
21	BOUT	O	Blue Video Output
22	GND3	-	Ground3 (drive part)
23	Vcc3	-	Vcc(drive part)
24	GOUT	O	Green Video Output
25	GCLP	-	Green Clamp Cap
26	ROUT	O	Red Video Output
27	RCLP	-	Red Clamp Cap
28	B/U	I	Brightness Uniformity

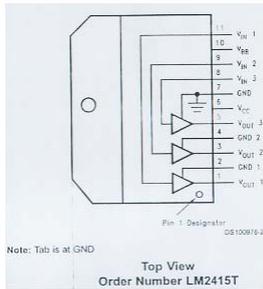

KEY COMPONENT SPECIFICATION

Monolithic Triple CRT Driver (LM2415)

1) Block Diagram

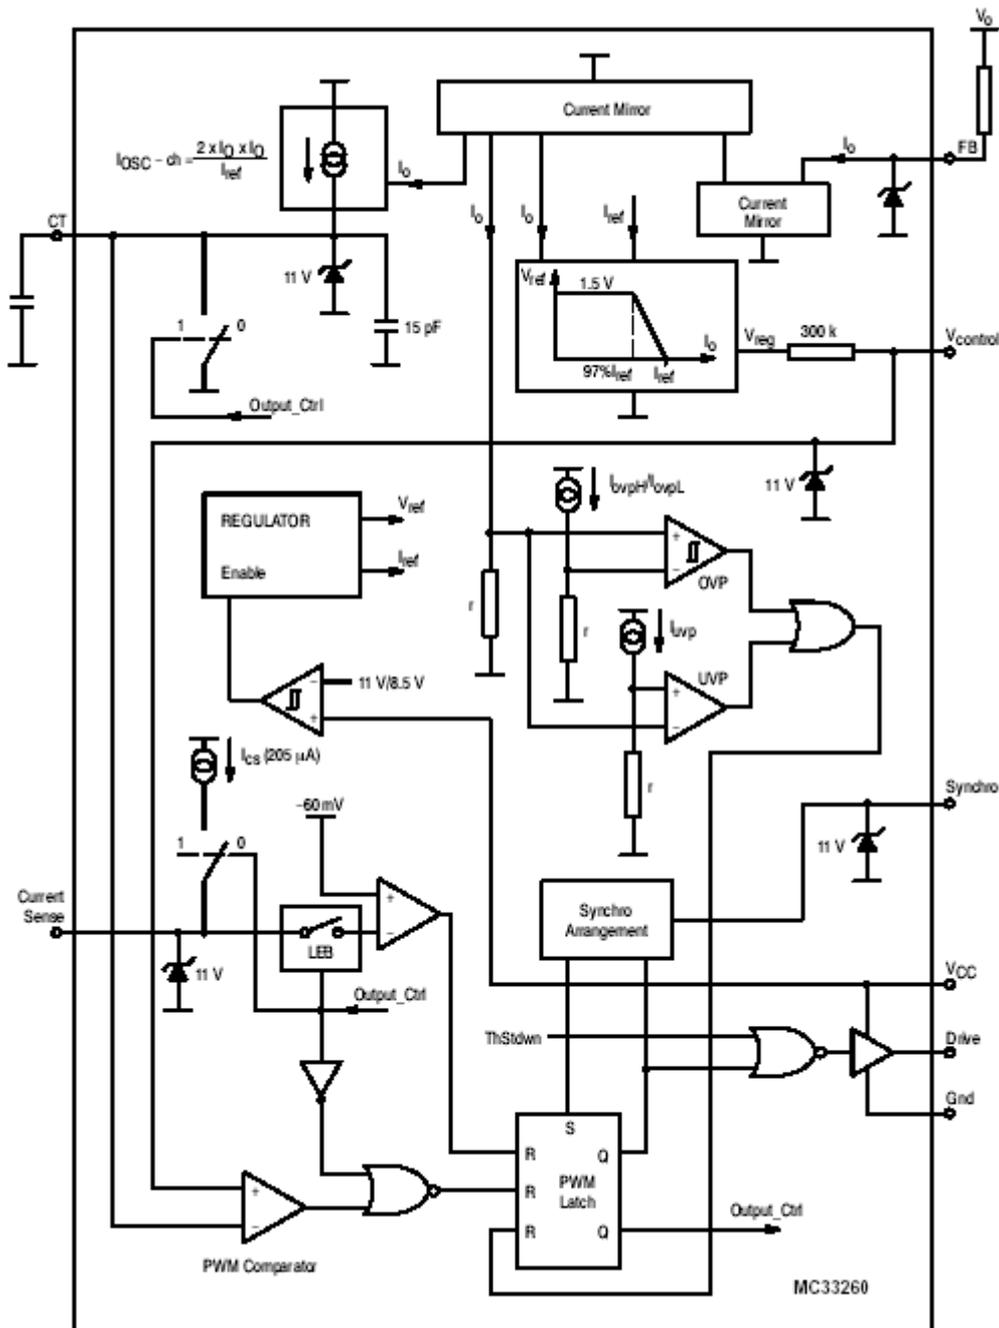

2) Pin Assignments

KEY COMPONENT SPECIFICATION

Power Factor Controller (MC33260)

1) Block Diagram
