Pluto 5 Development Kit

The Pluto System

The **Pluto** control system is available for those who need a 'state of the art' system to produce modern amusement equipment. Being standard 'off the shelf' components, it enables the machine producers to minimise their risk and maximise the market potential of their amusement machine.

With over 180,000 **Pluto** systems sold internationally, the reliability and performance of the **Pluto** family is well proven.

See for yourself Pluto's features

In order for you to see just how well **Pluto 5** or **Pluto 5 Casino** meets your requirements we have produced the **Pluto** Development Kit. This will allow you to see just how flexible and effective **Pluto 5** is for your product. The kit allows you to evaluate **Pluto 5** on various machines. It includes hardware for both reels and video.

Two versions of the **Pluto** control boards are available, **Pluto 5** and **Pluto 5 Casino**. **Pluto 5 Casino** has extra communications ports, power down switch monitoring and extra battery backed RAM.

Pluto 5 Casino is included in the kit as it retains the functionality of **Pluto 5** and the extra serial ports can be used for debug information during development.

The kit comes complete with sample software giving you something running as soon as you receive it. A 'light' version of the **Pluto 5** "FastTrack" software (see datasheet) is included, providing you with all the low level software you need to access the functions of the boards, without knowing the details of the hardware. A driver for the reels is also provided.
